At our practice, we provide comprehensive eyecare to ensure you are seeing your best. We accept most vision care plans and major medical insurances. Below is a guide to help determine what type of coverage will be used.

{Vision}

A **vision exam** includes screening for eye diseases and measurements for glasses and contact lenses.

Reasons for vision exams:

- To obtain glasses and contact lens prescriptions.

Diagnosis reasons for a vision exam:

- Routine eye wellness
- Myopia (nearsightedness)
- Hyperopia (farsightedness)
- Presbyopia
- Astigmatism

A vision exam is covered by vision insurance plans. If abnormal findings are discovered during your routine eye exam, you will be asked to return for a medical eye exam with additional testing. If a condition is diagnosed that requires a referral to a specialist, then your exam will be billed to your medical insurance.

{Medical}

A **medical eye examination** is performed to evaluate abnormal findings and monitor existing medical conditions.

Reasons for a medical exam:

- To manage any disease or abnormality that could result in a decline of vision that is not prescription-related.

Diagnosis reasons for a medical exam (not limited to):

- Diabetes/Prediabetes
- Visually significant cataract
- Glaucoma/Glaucoma suspect
- Age-related macular degeneration
- Retinal hole/tear/detachment
- Anatomical narrow angle
- Conjunctivitis
- Hydroxychloroquine/Plaquenil use

I have read and acknowledge the policy regarding insurance billing.
